

Math 20-1 Worksheet – 9.1 Linear Inequalities in Two Variables

Part 1 – Easy Questions (from Kuta Software – Graphing Linear Inequalities 1)

Q1: Determine the inequalities that corresponds to each graph.

$$y \geq -3x + 4$$

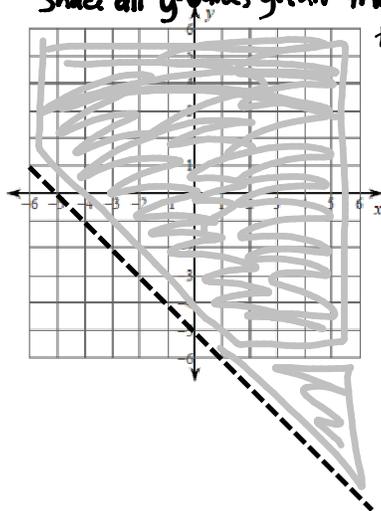

$$y < x - 2$$

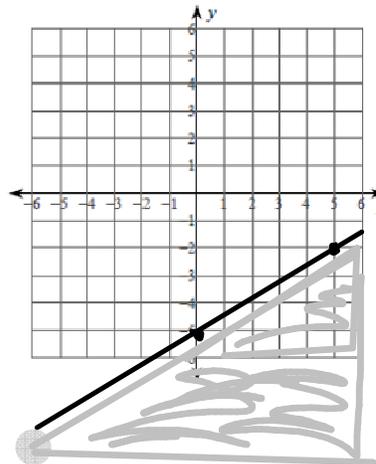

Q2: Graph each inequality.

$$y > -x - 5$$

Shade all y -values greater than the line.

$$y \leq \frac{3}{5}x - 5$$

Shade all y -values less than (or equal to) the line.

Part 2 – Textbook Questions

Pg 472 #1ad: Which of the ordered pairs are solutions to the given inequality?

<p style="text-align: center;">$y < x + 3$</p> <p style="text-align: center;">{(7,10), (-7,10), (6,7), (12,9)}</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: left;"> <p>$10 < 7 + 3$ $10 < 10$ <u>Nope</u></p> </div> <div style="text-align: left;"> <p>$10 < -7 + 3$ $10 < -4$ <u>Nope</u></p> </div> <div style="text-align: left;"> <p>$9 < 12 + 3$ $9 < 15$ <u>Yes!</u></p> </div> </div> <div style="text-align: left; margin-top: 10px;"> <p>$7 < 6 + 3$ $7 < 9$ <u>Yes!</u></p> </div>	<p style="text-align: center;">$2x + y \geq 6$</p> <p style="text-align: center;">{(0,0), (3,1), (-4,-2), (6,-4)}</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: left;"> <p>$2(0) + (0) \geq 6$ $0 \geq 6$ <u>Nope</u></p> </div> <div style="text-align: left;"> <p>$2(3) + (1) \geq 6$ $7 \geq 6$ <u>Yes!</u></p> </div> <div style="text-align: left;"> <p>$4(-4) + (-2) \geq 6$ $-10 \geq 6$ <u>Nope</u></p> </div> </div> <div style="text-align: left; margin-top: 10px;"> <p>$2(6) + (-4) \geq 6$ $8 \geq 6$ <u>Yes!</u></p> </div>
--	--

Pg 472 #3ace: Consider each inequality.

- Express y in terms of x , if necessary. Identify the slope and y -intercept.
- Indicate whether the boundary should be a solid line or a dashed line.

$y \leq x + 3$

↓
SOLID

$m = 1$
 $b = 3$

$4x + y > 7$

$y > -4x + 7$
↓
DASHED

$m = -4$
 $b = 7$

$4x + 5y \geq 20$

$5y \geq -4x + 20$
 $y \geq -\frac{4}{5}x + 4$
↓
SOLID

$m = -\frac{4}{5}$
 $b = 4$

Pg 472 #5ac: Graph each inequality using technology.

$$6x - 5y \leq 18$$

$$-5y \leq -6x + 18$$

$$\div (-5) \quad \div (-5) \quad \div (-5)$$

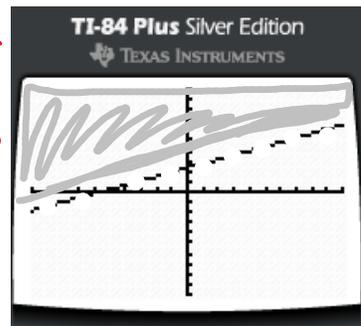

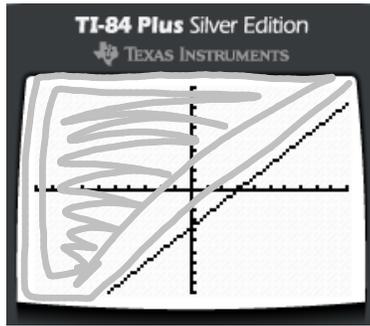

$$y \geq \frac{6}{5}x - \frac{18}{5}$$

$$-5x + 12y - 28 > 0$$

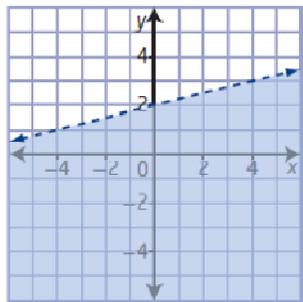

$$12y > 5x + 28$$

$$y > \frac{5}{12}x + \frac{7}{3}$$

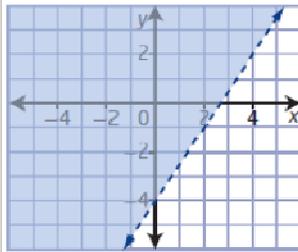

I manually colored and dotted the line

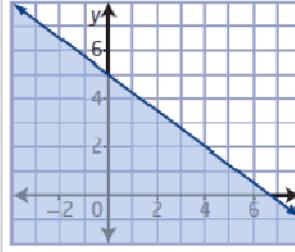

Pg 472 #9acd: Determine the inequality that corresponds to each graph.

$$y < \frac{1}{4}x + 2$$

$$y > \frac{3}{2}x - 4$$

$$y \leq -\frac{3}{4}x + 5$$

Pg 472 #11: Amaruq has a part-time job that pays her \$12/h. She also sews baby moccasins and sells them for a profit of \$12 each. Amaruq wants to earn at least \$250/week.

- a. Write an inequality that represents the number of hours that Amaruq can work and the number of baby moccasins she can sell to earn at least \$250. Include any restrictions on the variables.

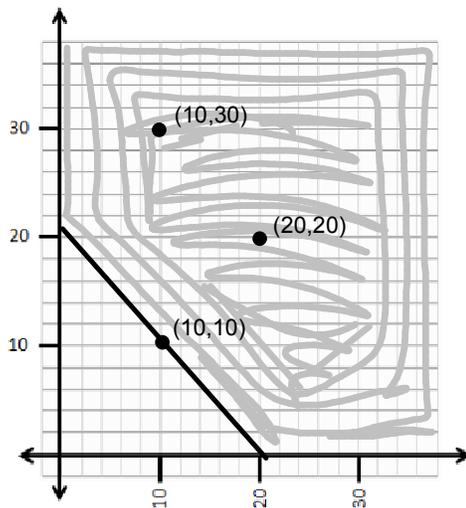

Let x = number of hours worked
 y = number of moccasins sold

$$\text{Earnings} = 12x + 12y$$

We want more than or equal to 250.

$$12x + 12y \geq 250$$

- b. Graph the inequality.

$$12y \geq -12x + 250$$

$$y \geq -x + 20.8\bar{3}$$

- c. List three different ordered pairs in the solution.

Any point on the line or in the shaded region.

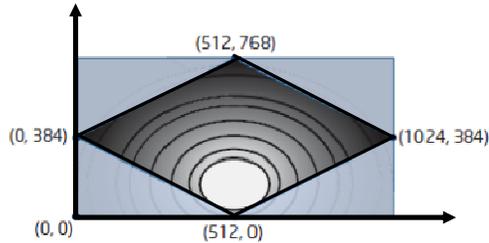

Ex: (10, 10) (20, 20) (10, 30)

- d. Give at least one reason that Amaruq would want to earn income from her part-time job as well as her sewing business, instead of focusing on one method only.

① If she lost job, still has income.

② If nobody is buying moccasins, still has income.

Pg 472 #17: Masha is a video game designer. She treats the computer screen like a grid. Each pixel on the screen is represented by a coordinate pair, with the pixel in the bottom left corner of the screen as (0,0). For one scene in a game she is working on, she needs to have a background like the one shown.

The shaded region on the screen is made up of four inequalities. What are the four inequalities?

$m = \frac{768 - 384}{512 - 0} = \frac{3}{4}$ $y = \frac{3}{4}x + b, (0, 384)$ $384 = \frac{3}{4}(0) + b$ $b = 384$ $y = \frac{3}{4}x + 384$	$m = \frac{0 - 384}{512 - 0} = -\frac{3}{4}$ $y = -\frac{3}{4}x + b, (0, 384)$ $384 = -\frac{3}{4}(0) + b$ $b = 384$ $y = -\frac{3}{4}x + 384$	$m = \frac{384 - 768}{1024 - 512} = -\frac{3}{4}$ $y = -\frac{3}{4}x + b, (512, 768)$ $768 = -\frac{3}{4}(512) + b$ $b = 1152$ $y = -\frac{3}{4}x + 1152$	$m = \frac{384 - 0}{1024 - 512} = \frac{3}{4}$ $y = \frac{3}{4}x + b, (512, 0)$ $0 = \frac{3}{4}(512) + b$ $b = -384$ $y = \frac{3}{4}x - 384$
$y \geq \frac{3}{4}x + 384$ $0 \leq x \leq 512$	$y \leq -\frac{3}{4}x + 384$ $0 \leq x \leq 512$	$y \geq -\frac{3}{4}x + 1152$ $512 \leq x \leq 1024$	$y \leq \frac{3}{4}x - 384$ $512 \leq x \leq 1024$
